TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL
Frontend: React, Next.js, React Native, Tailwind CSS, Zustand, Redux
Backend & Data: Node.js, NestJS, Express, REST APIs, PostgreSQL, MongoDB, Redis, Socket.IO
Infrastructure & Tools: ShadCn, Docker, BullMQ, MinIO, Git, GitHub, Postman

PROFESSIONAL EXPERIENCE

Frontend Developer | TECHSERVICES LIMITED Apr 2025 - Dec 2025
Lagos, Nigeria

- Developed customer onboarding and KYC interfaces using React, Next.js and TypeScript, enabling users to submit personal information and complete verification workflows.
- Built transfer and transaction interfaces for initiating payments, reviewing transaction details and displaying pending, successful and failed states.
- Integrated REST APIs for onboarding, account management, transfers and transaction history, handling validation, loading states, API errors and user feedback.
- Translated Figma designs into responsive, reusable components and collaborated with backend engineers to resolve integration issues across banking workflows.

Software Developer (Contract) | EDALA REALTORS Jul 2025 - Sep 2025
Lagos, Nigeria

- Developed a realtor management platform using Next.js and TypeScript, supporting onboarding, sales submissions, referrals and application workflows for more than 2,000 realtors.
- Implemented JWT-based authentication and bcrypt password hashing for registration, login and access to protected realtor and administrator routes.
- Built full-stack Next.js modules and API routes for sales tracking, commissions, referrals, team performance and operational dashboards.
- Implemented email verification, password recovery, profile management, administrative approvals, analytics and reporting workflows.

SELECTED PROJECTS

Foundry | Multi-Agent AI Project-Production Workspace | [GitHub](#)
Next.js, TypeScript, React Flow, BTL Runtime

- Developed a multi-agent workspace where seven AI agents converted user objectives into PRDs, architecture plans, code, checklists and starter repositories.
- Used BTL Runtime to coordinate agent execution, pass outputs between agents and support retries, logs and cost tracking.
- Built a React Flow canvas to show agent dependencies, progress and approval checkpoints.

QueueWatch | Operational Diagnostics & Observability Platform | [GitHub](#) | [Live Demo](#)
Next.js, NestJS, PostgreSQL, Redis, BullMQ

- Developed a real-time background-job observability platform using Next.js, NestJS, PostgreSQL for monitoring queue health, worker activity, retries, failures and dead-letter queues.
- Used Redis and BullMQ to manage queue state, process background jobs, record retry attempts and support recovery of failed tasks.
- Built telemetry APIs and dashboards showing job status, execution time, worker activity and failure details in real time.

FileFlow | Distributed File Processing Pipeline | [GitHub](#) | [Live Demo](#)
Node.js, BullMQ, Redis, PostgreSQL, MinIO

- Built an asynchronous file-processing pipeline with queue-based uploads, worker services, PostgreSQL metadata persistence, and real-time status tracking.
- Implemented retry handling, failure recovery, and scalable object storage workflows using Redis, BullMQ, and MinIO.

VOLUNTEER EXPERIENCE

Programs Team Lead | Google Developer Groups on Campus, LASU

- Led the planning and delivery of more than 20 technical events reaching over 2,500 participants, coordinating speakers, volunteers, and programme operations.
- Helped deliver LASU TECH X 5.0, which recorded more than 700 registrations and 400 attendees.

EDUCATION

BSc Computer Science | Lagos State University May 2023 - Aug 2026
Relevant coursework: Data Structures and Algorithms, Computer Networking, Computer Architecture, Discrete Mathematics

CERTIFICATIONS

Software Engineering Program | AltSchool Africa May 2023 - May 2024
Coursework included Frontend Engineering, Technical Writing, Data Structures, and Algorithms.
